

Societal Differentiation in Policy-Networks: Governing Climate Change in Germany

Volker Schneider

Berlin, 2. 04. 2019

Contents of Presentation

„Bringing Society Back in“ to Policy Network Studies

Recent Policy Network Studies concentrate too much on the micro and meso level of analysis
Need for a macro perspective: Modern societies as assemblages of complex systems

The Policy Network of German Climate Policy

A study within the framework of the COMPON research network
Explanation of data collection

Application of the differentiation approach

Aggregation of individual organizations into organization types ("Species")
Analysis of cooperation relations, exchange of information and reputation for influence.

Conclusion

Summary and outlook

Bringing Society Back in: Gehry versus „Plattenbau“

Problem

Microfoundation of macro processes often led to economical models at micro level
However, modern societies should think as an assemblage of complex systems

**Embeddedness of policy processes in structures of societal differentiation
(cleavages, subsystemic and sectoral differentiation at macro level)**

Varieties of differentiation

- Segmentary differentiation: Isolated homogenous fragments
- Stratificatory differentiation: Positions in a hierarchy of status
- Functional differentiation: Roles, positions and orientations in a division of labor
- Institutional differentiation: Roles and positions in rule structures
- Relational Differentiation: Roles and positions in relational structures

Society as a complex system

Not historical sequences, but simultaneity of heterogenous structures

Many metaphors to think such structures:

- Overlay, entanglement, nesting, interpenetration, assemblage
- Interdependence, networking, linking, concatenation

Gehry versus Parthenon

Hillary Clinton at her farwell speech 02/2013

[president] Truman and [secr. of state] Acheson were building the Parthenon with classical geometry and clear lines. The pillars were a handful of big institutions and alliances dominated by major powers.

.... we do need a new architecture for this new world; more Frank Gehry than formal Greek. (...) Where once a few strong columns could hold up the weight of the world, today we need a dynamic mix of materials and structures..”

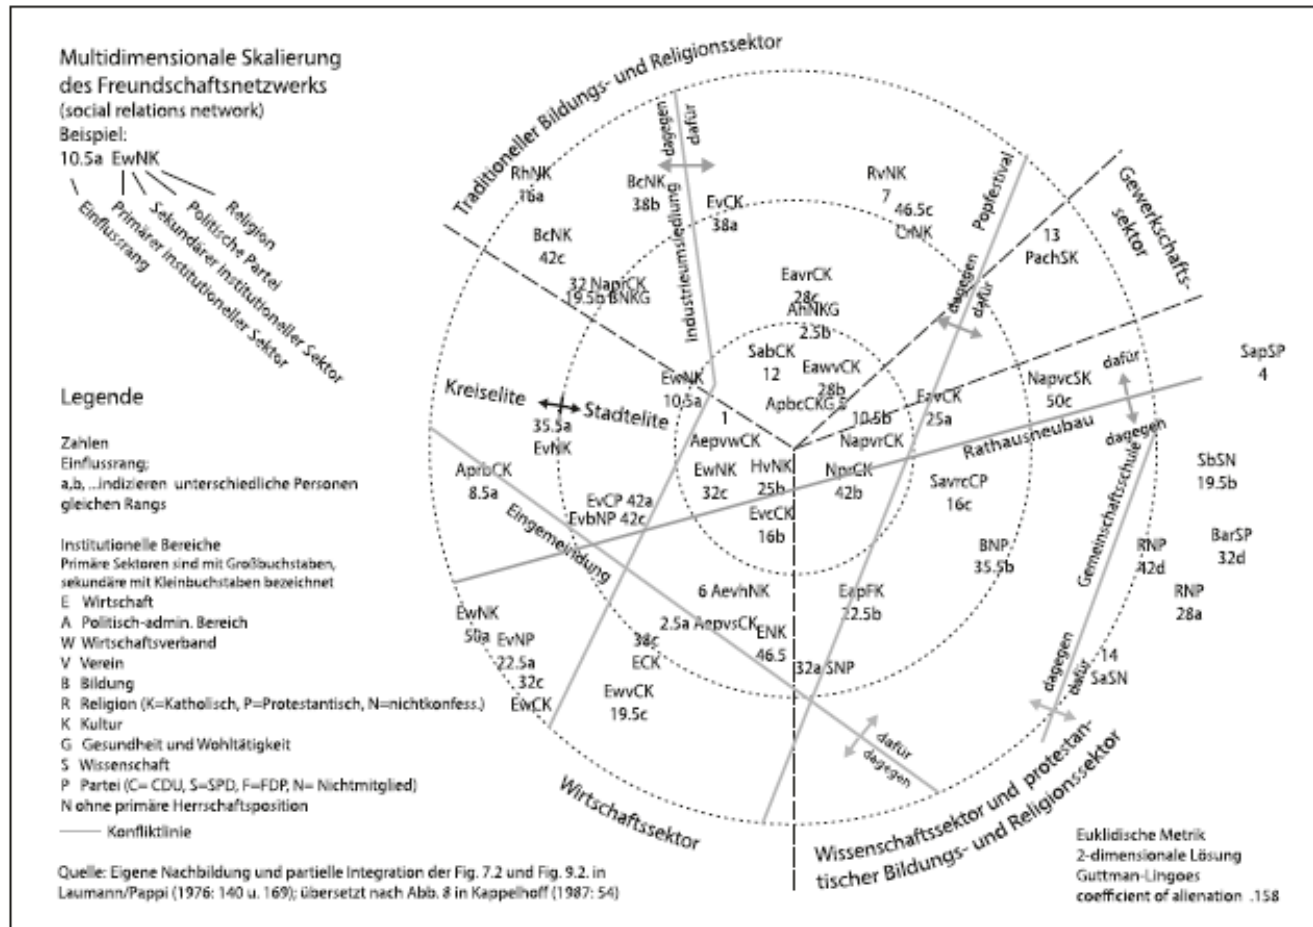

Hillary Clinton at her farwell speech 02/2013

Gehry versus „Formal Greek and Plattenbau“

A Gehry type classic with multiple structures of differentiation is Laumann & Pappi's „Networks of Collective Action“

The German Climate Policy Network A Study in the Framework of COMPON

COMPON: Comparing climate policy networks in a dozen of countries

Two types of network analysis

One-Mode Networks

- Data collection by standardized surveys based on organization lists: Questions are related to relations, preferences, and organizational attributes

Two-Mode Networks

- Discourse Network Analysis based on qualitative content analysis, mostly media analysis

Data collection in Germany between 8-2011 and 10-2012

70 National organisations as targets

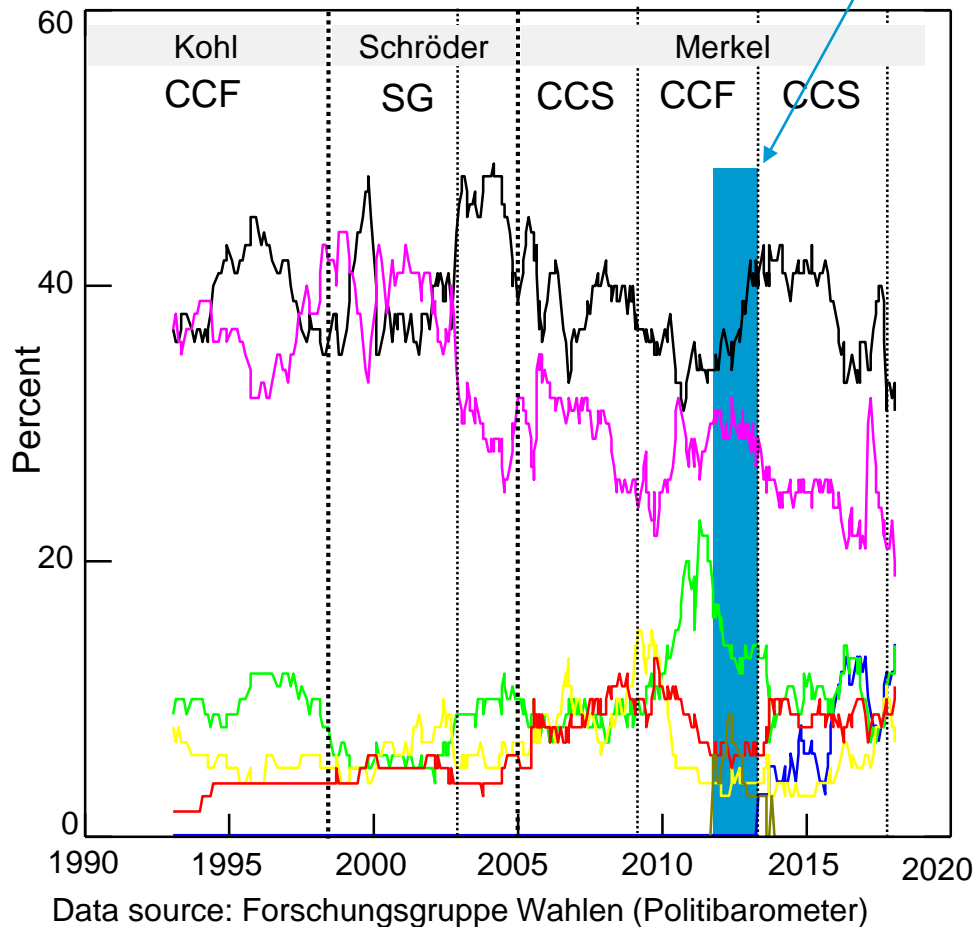

22 EU & International Organizations

50 interviews with national ORGs

Data collection supported by U.S. NSF on U Minnesota (J Broadbent)

Political Mood in German Polls

Time of data collection

Governmental Leadership

Governmental Coalitions

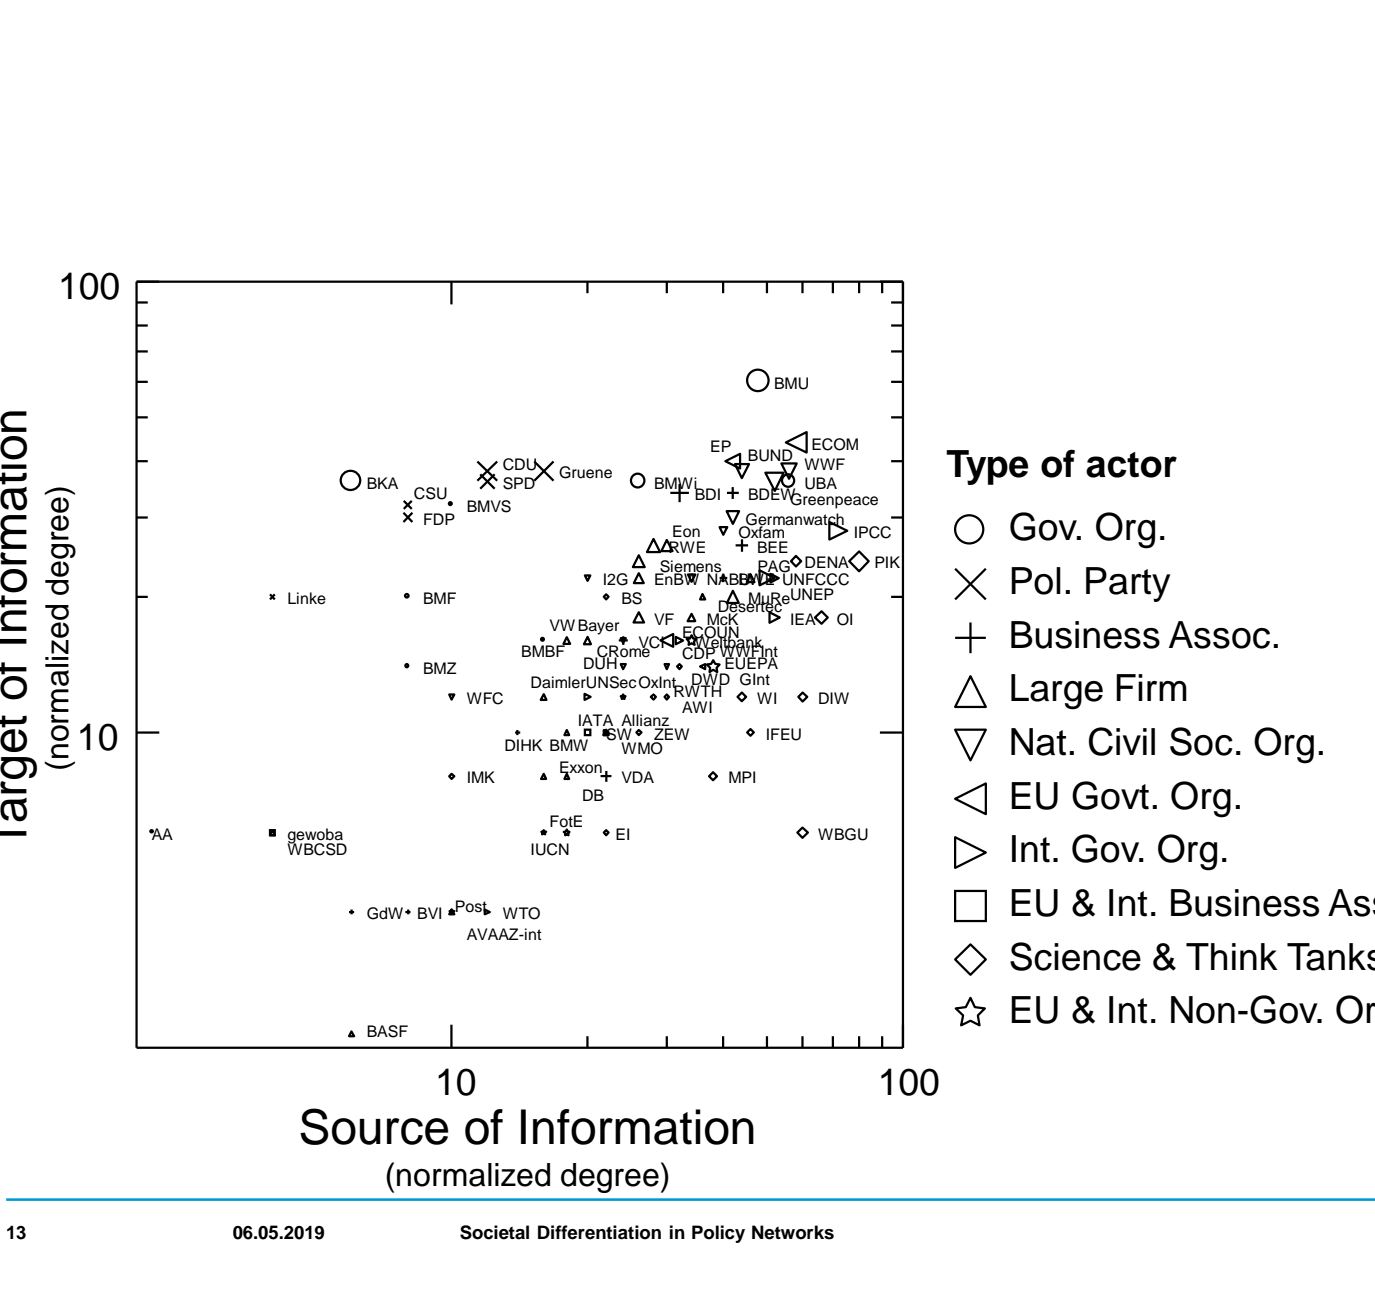

CCF = CDU/CSU/FDP Government

SG = SPD and Greens

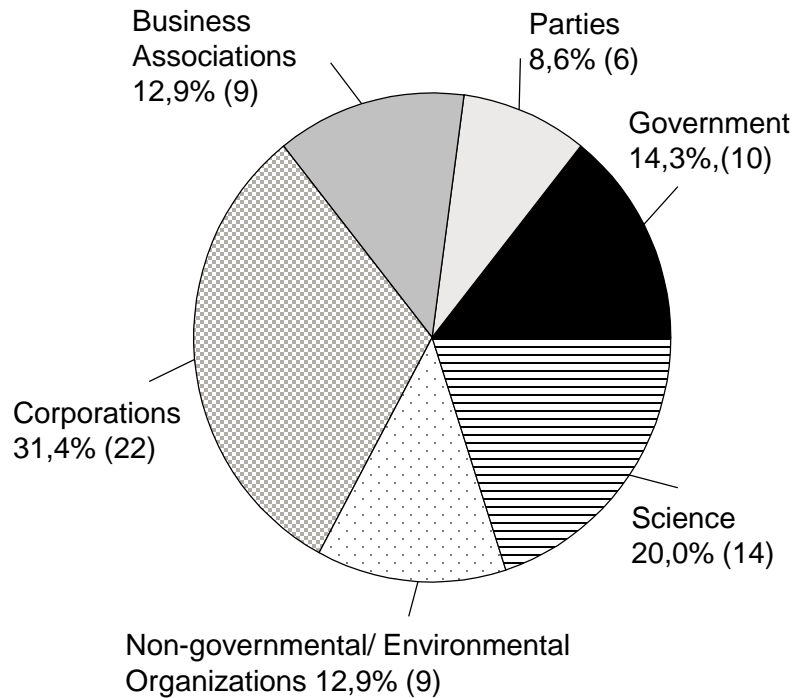

CCS = Grand Coalition (CDU/CSU/SPD)

- CDU/CSU (Christian Democrats)
- SPD (Social Democrats)
- Greens
- Liberal Party
- - - Left Party
- Pirates
- AFD (Populist Party)

Power Shares of Policy Actors

Policy Preferences

Govt puts too much effort into reducing GHG emission

GHG-emission has negative impacts on the German economy

Energy security more important than GHG reduction

To reduce GHG by 40% until 2020 is too ambitious

Transition to renewable energy is too costly

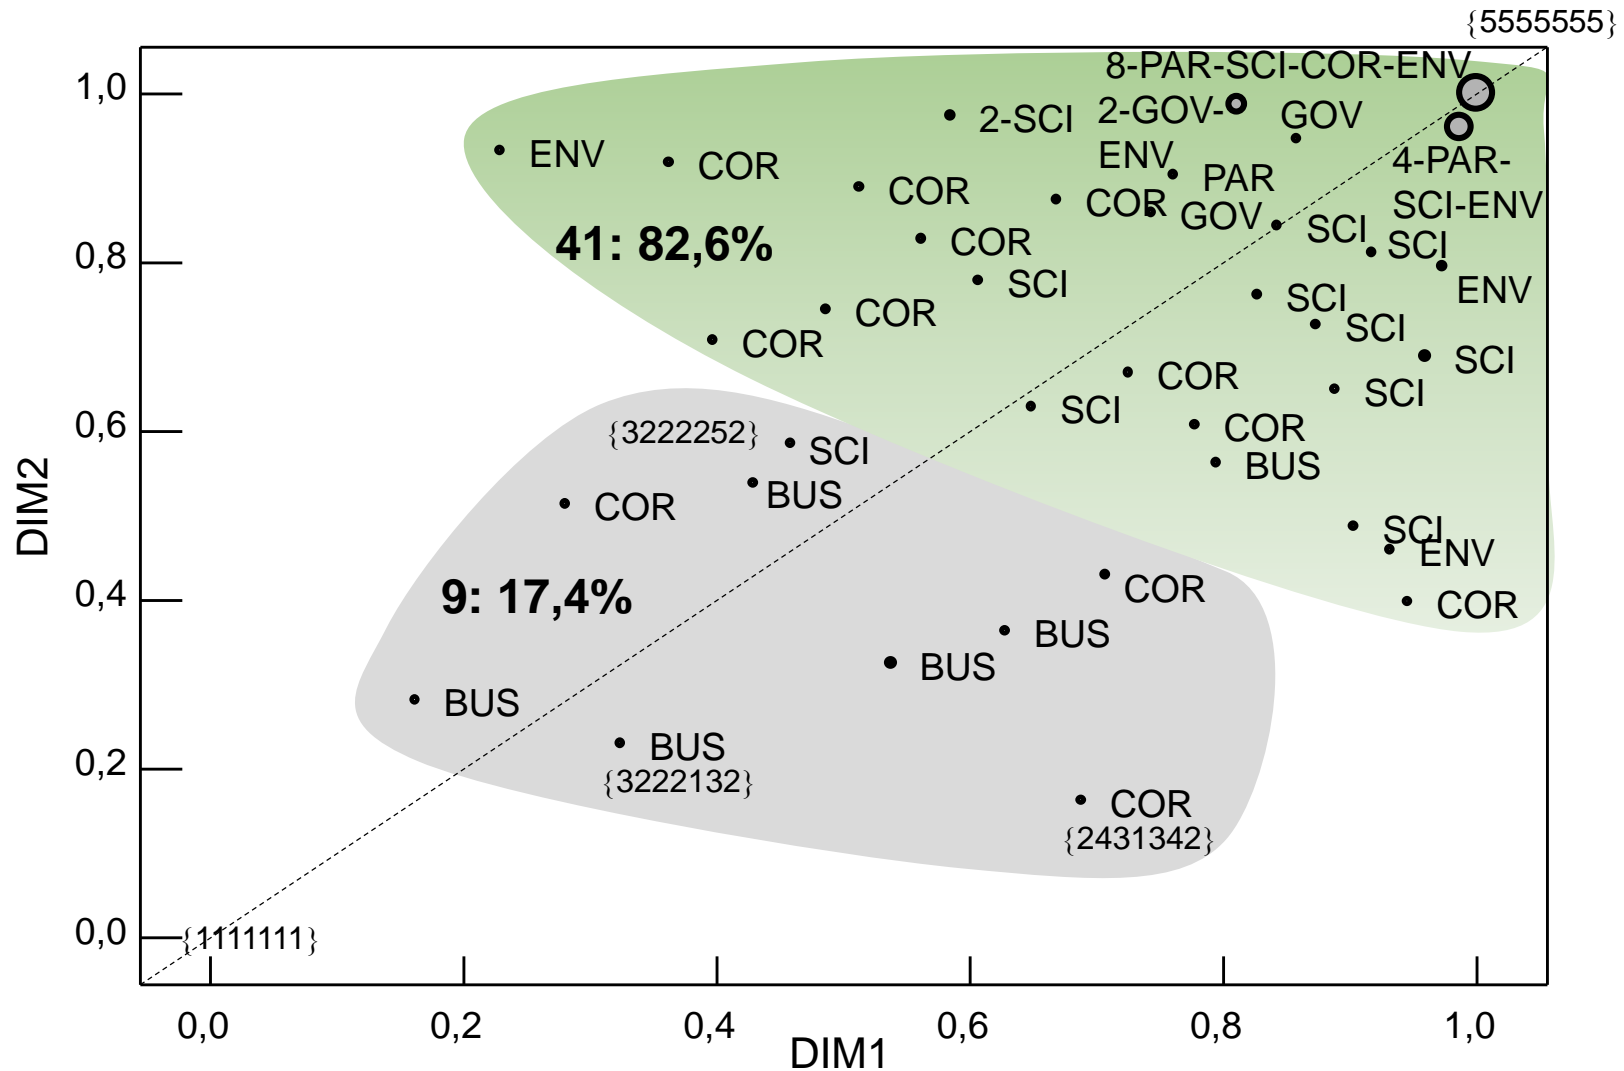

Nuclear energy is most Realistic alternative to fossile fuels

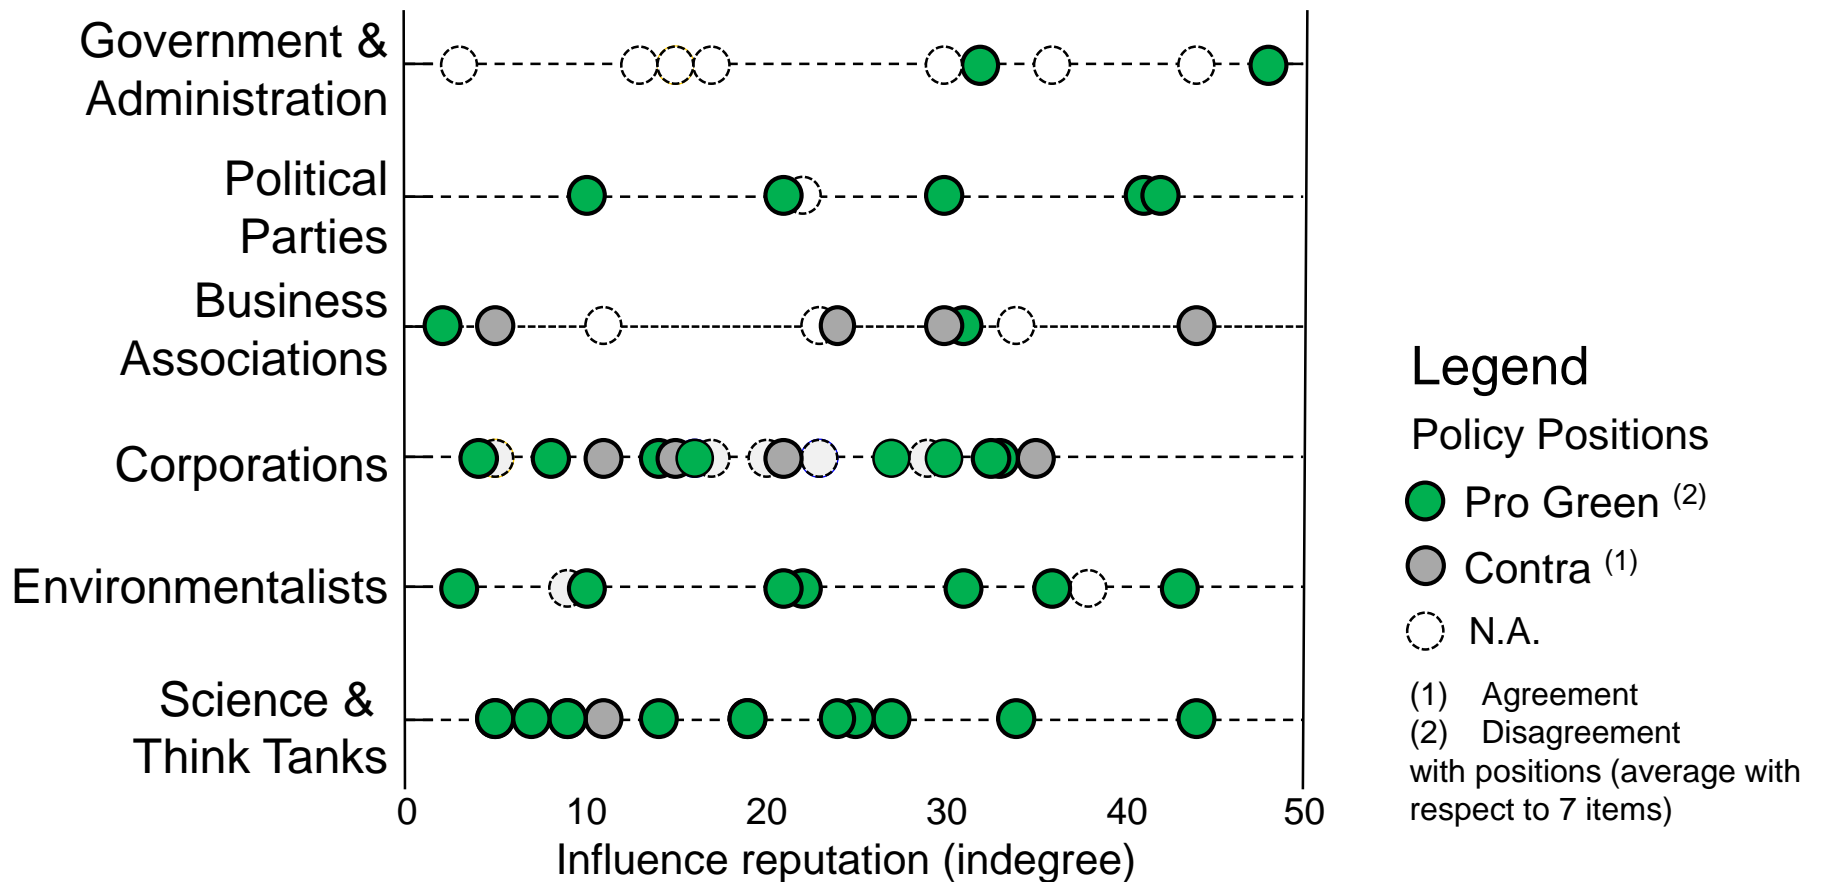

Getting 18% renewable sources by 2020 is too ambitious

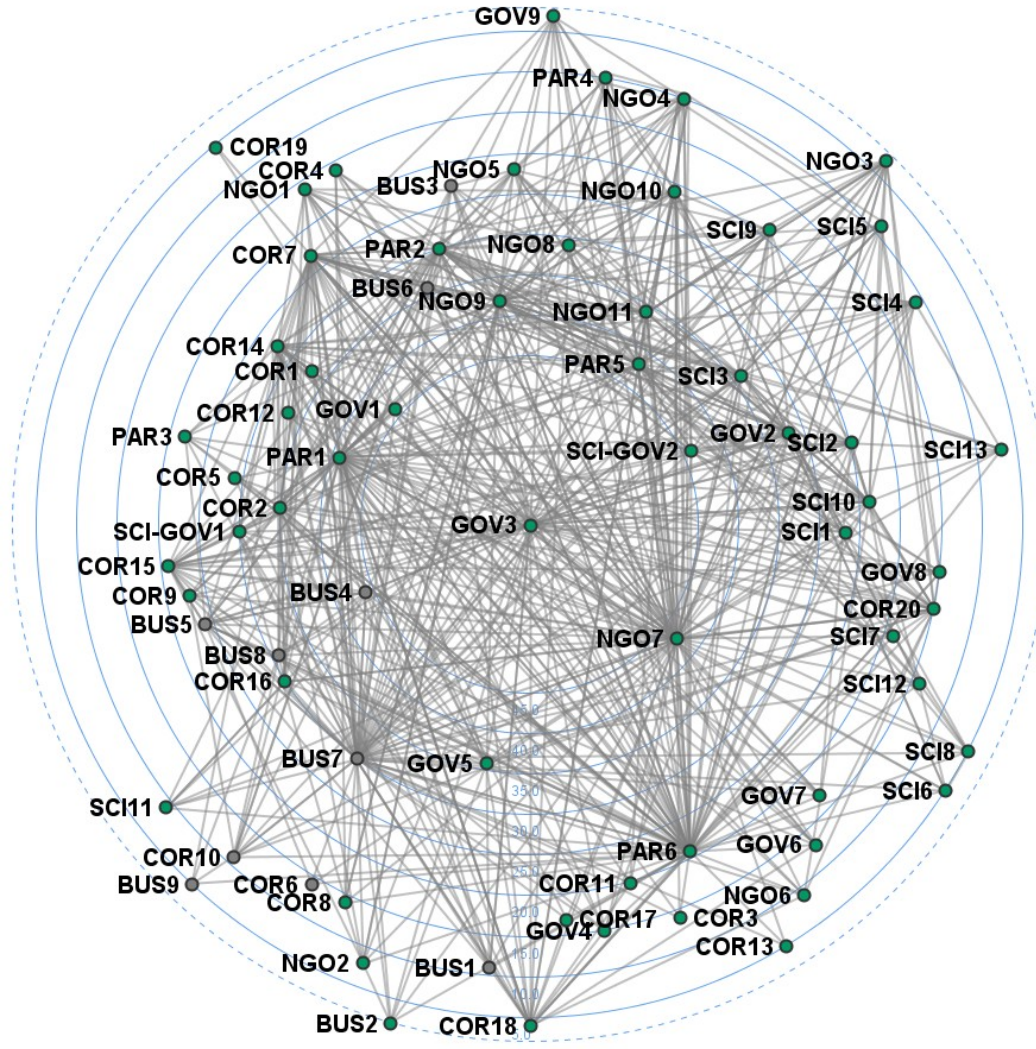

Two coalitions: Partial Ordering of Policy Positions

Types of actors, influence, and policy preferences

Relations of cooperation and advice in the German Policy Network

Differentiation structures that have so far been separated must be thought together!

Major Structures of differentiation

Functional differentiation

Politics, Economy, Science, Education, Law, etc.

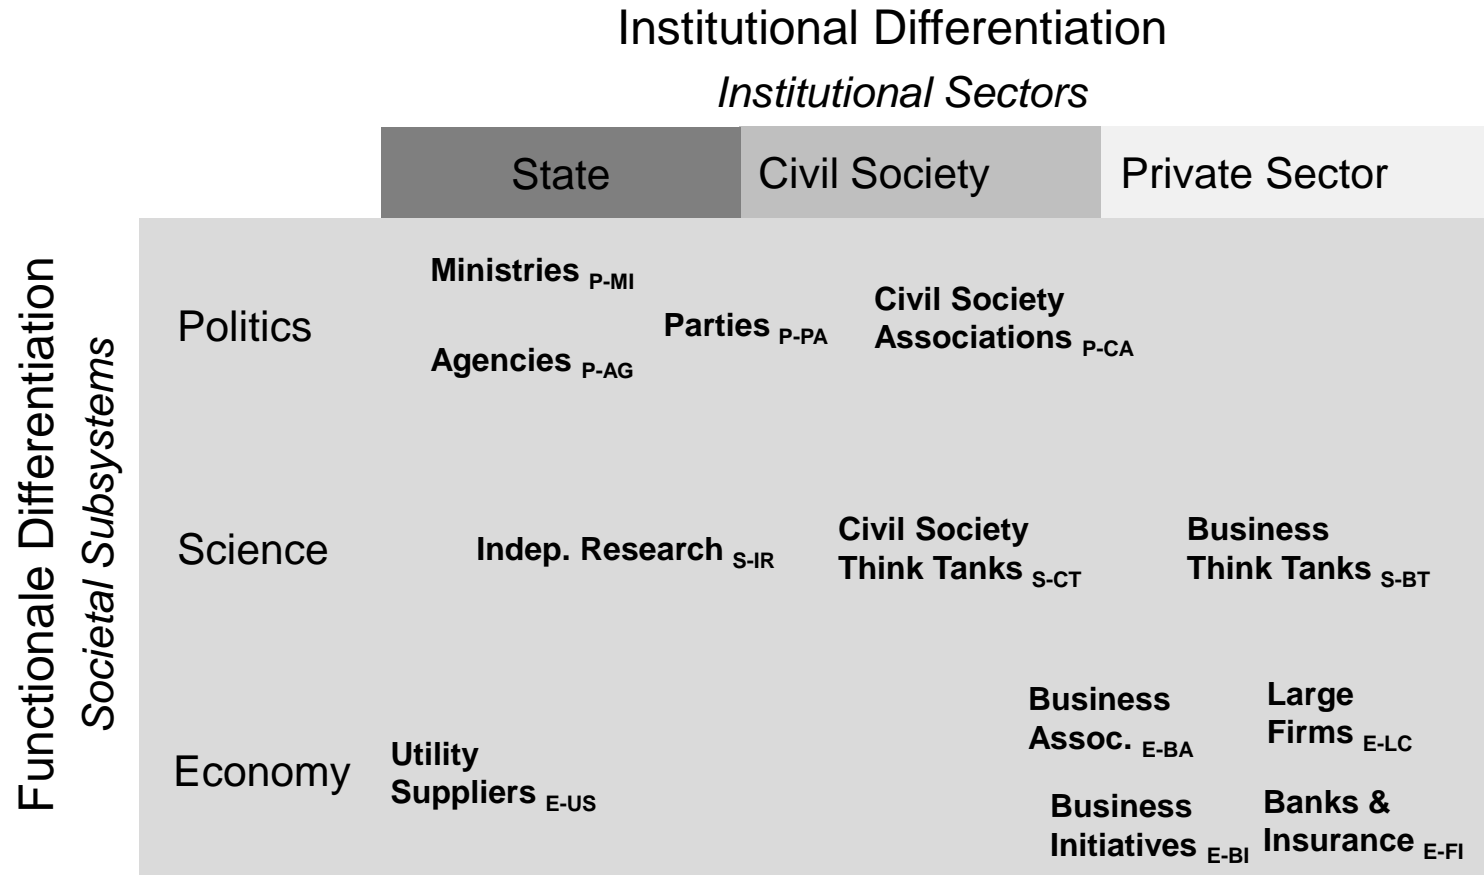

Institutional Differentiation (in a Governance Perspective)

Hierarchy, Network, Market

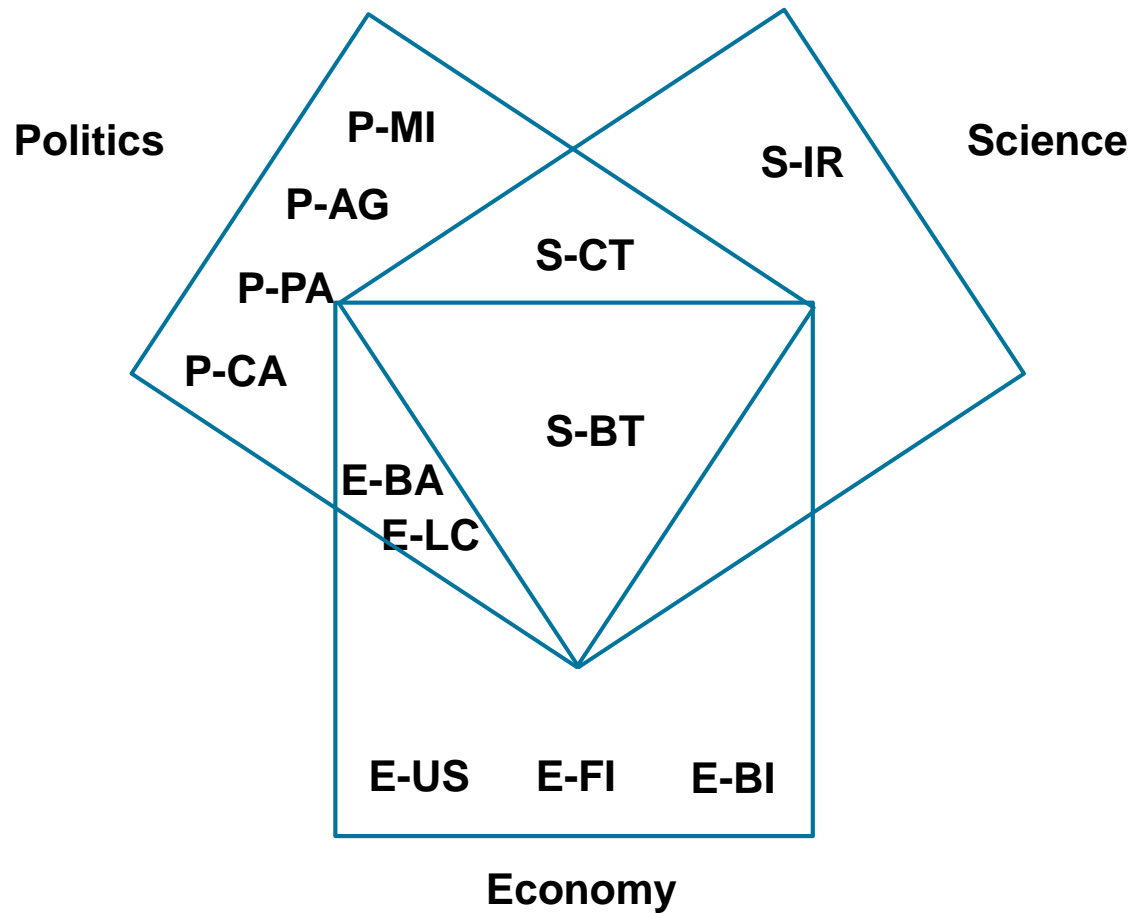

Public property, mixed property, private property

Civil society, Private sector, State

Functional and institutional differentiation and their organizational ecologies

Assemblage and Nestedness of Subsystems: „Verschränkung“ of Systems

Policy-Actors: Functional subsystems and their organizational ecologies

Cooperation and advice relationships

Block-Densities (<0.19)

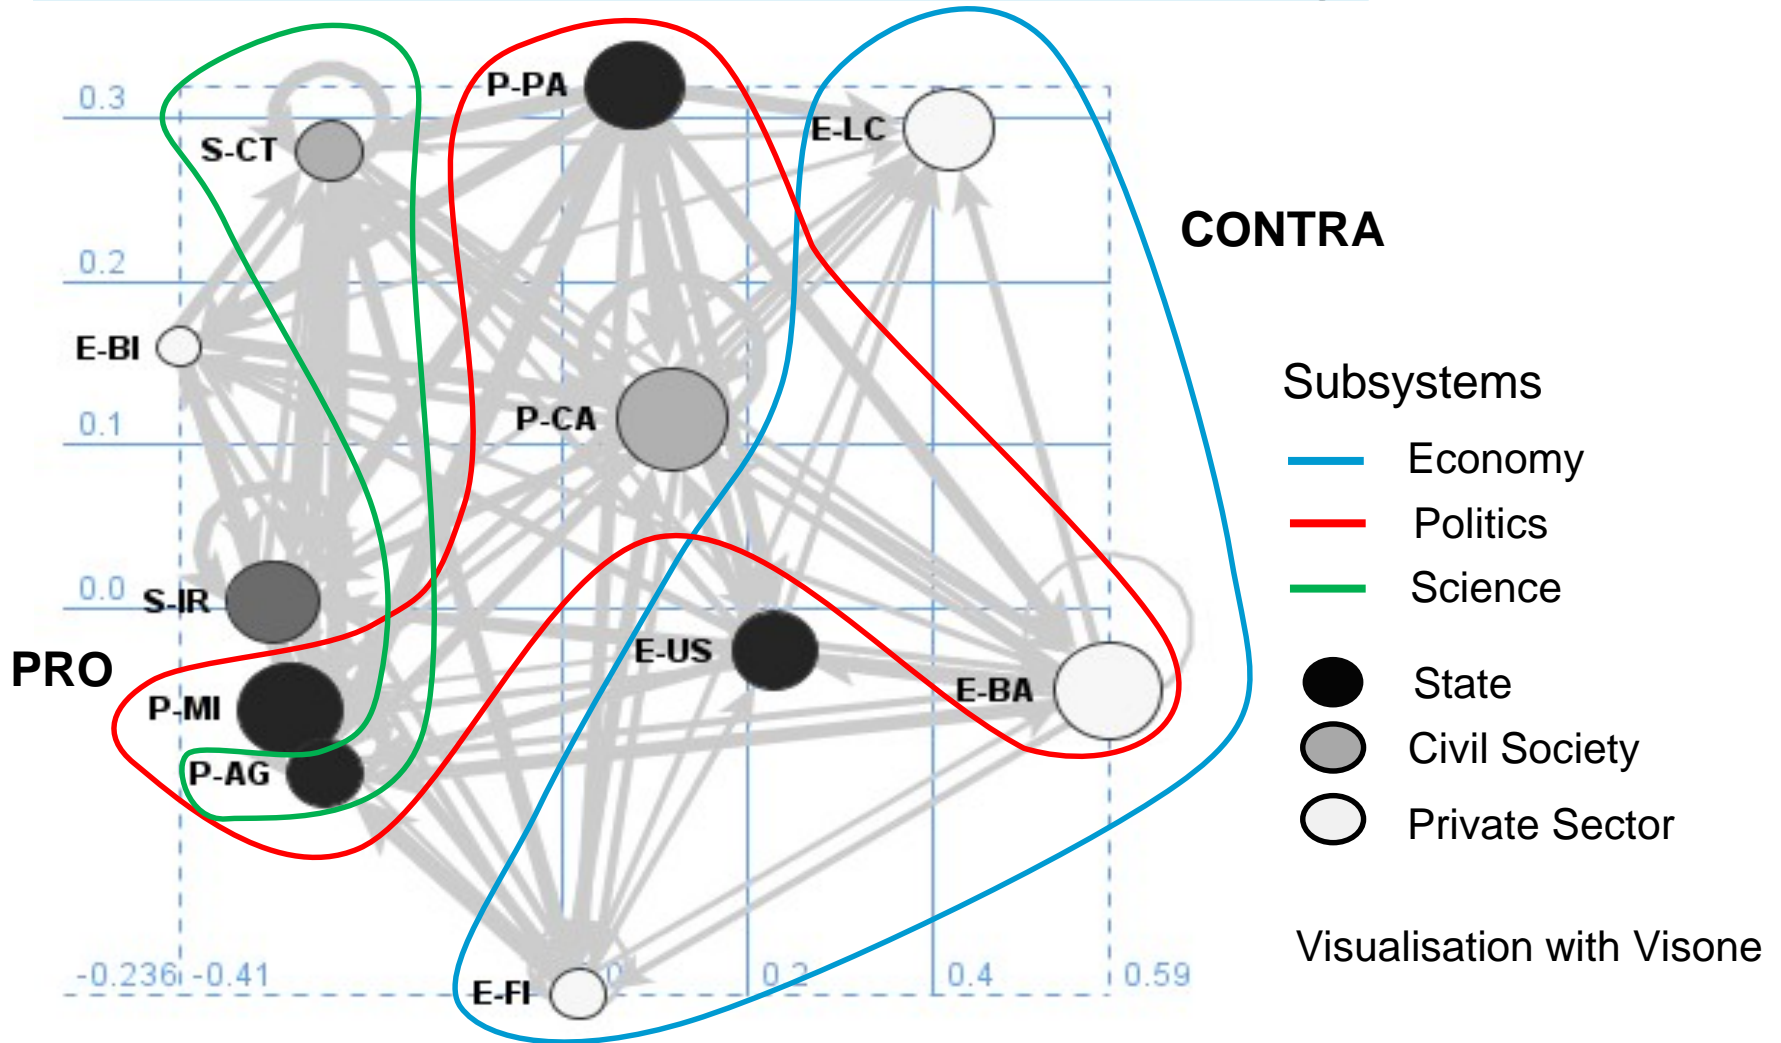

Subsystems

- Economy
- Politics
- Science

Union of the cooperation and advice relationships; symmetrical (max); node position = degree centrality; node size = influence reputation

Visualisation by Visone

Issue Positions (7 Issues) and Information Exchange

MDS of aggregated policy positions of the different organization types (= group average); node size corresponds to the influence reputation of the blocks; metric solution (Euclidean distance); stress = 0.100; edge width = block density; edges = information exchange relationships

IV.

Conclusion and outlook

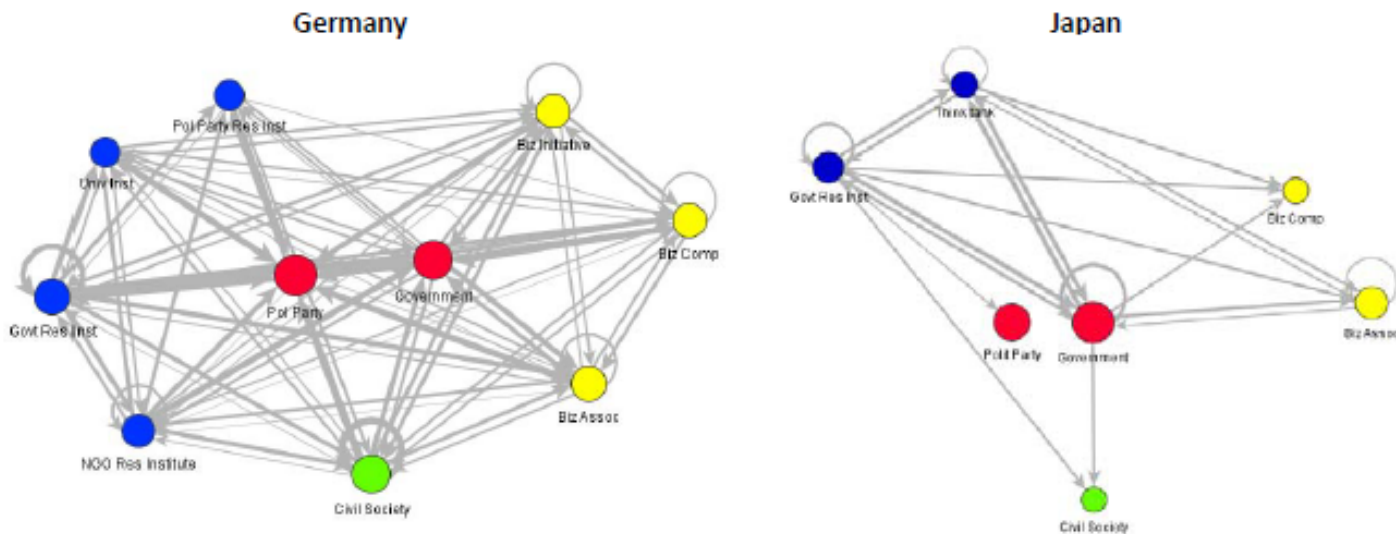

The embedding of organizational policy networks in macro-social structures must be taken into account.

The effect of the macrostructures can be observed in the various configurations of network relationships

The knowledge gained from national case studies is limited. It only becomes interesting when very different national configurations are compared.

See DE – JP - comparison

Figure 6: Scientific Information Exchange at Organizational and Systems Level

Network relations: Science information "source" and "destination" (combined)

Size of Nodes: Mean of the Reputation Score. Width of ties: Ties shown more than overall density in each country

Graphs produced with *visone* Version 2.17
