Forschung  
BMBF

# Agenda

- Background informations
- Data collection methods
- Empirical results
- Strategy types for networking

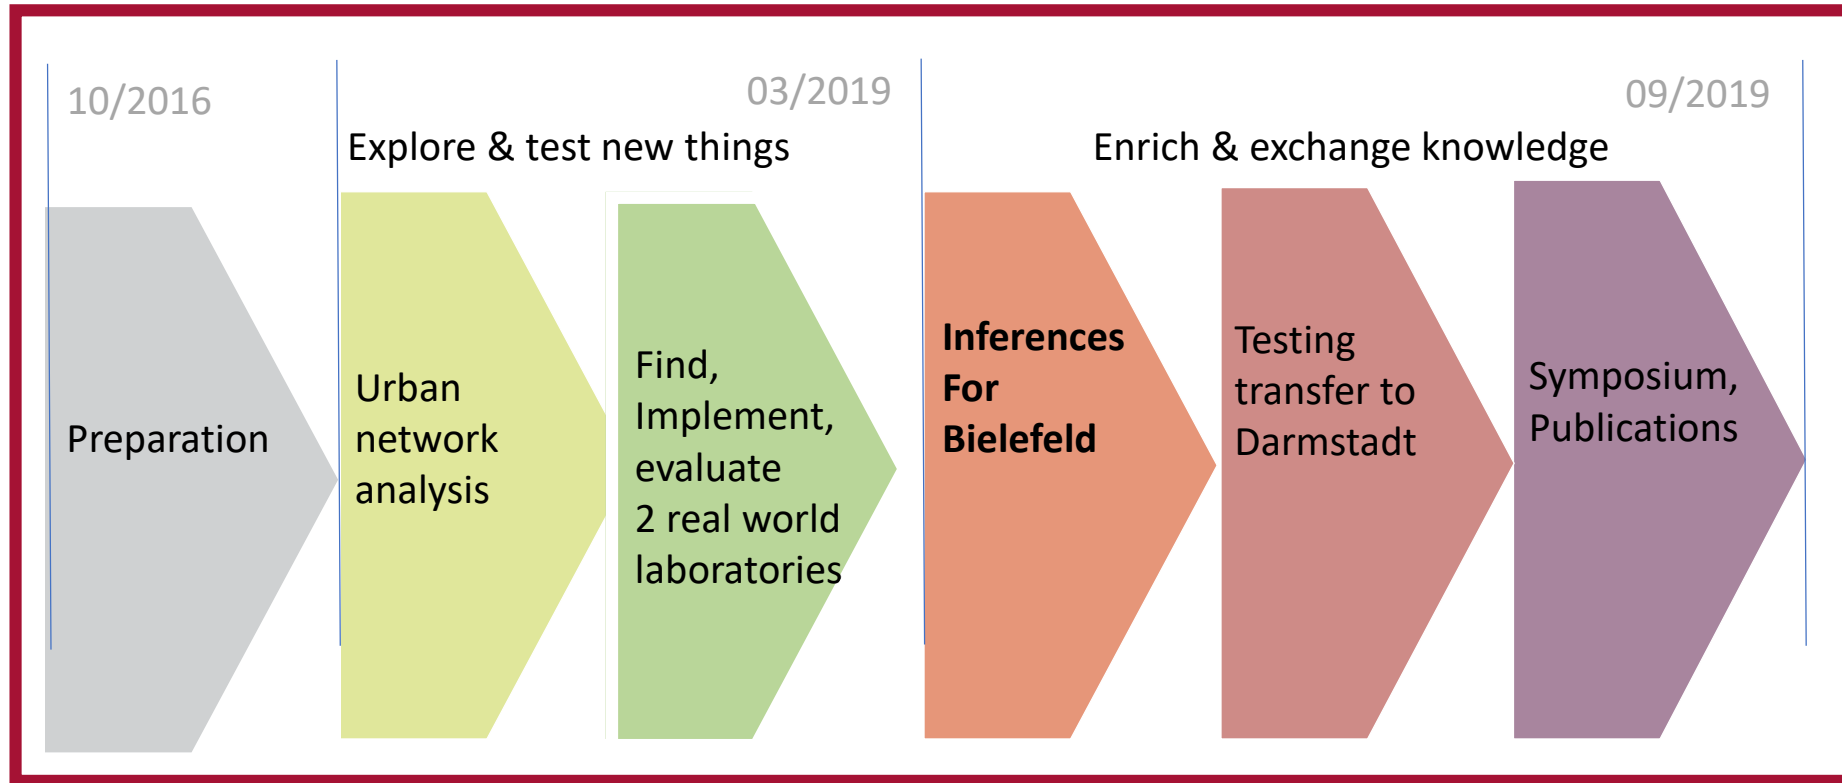

# Aims of KlimaNetze

- Identification of relevant climate protection actors and activities in Bielefeld
- Role of urban network structures in the development of social innovations and in urban transformation processes
- Further development of methods for use in urban contexts
- Strengthening cooperation between urban actors

# Time table of the project

# How are social innovations created?

## The "Multi-level Perspective" concept

Innovation research is based on the assumption that innovations emerge from niches.

Geels, F. W. (2002): Technological transitions as evolutionary reconfiguration processes: a multi-level perspective and a case-study. In: Research Policy, 31(8), S. 1257-1274.

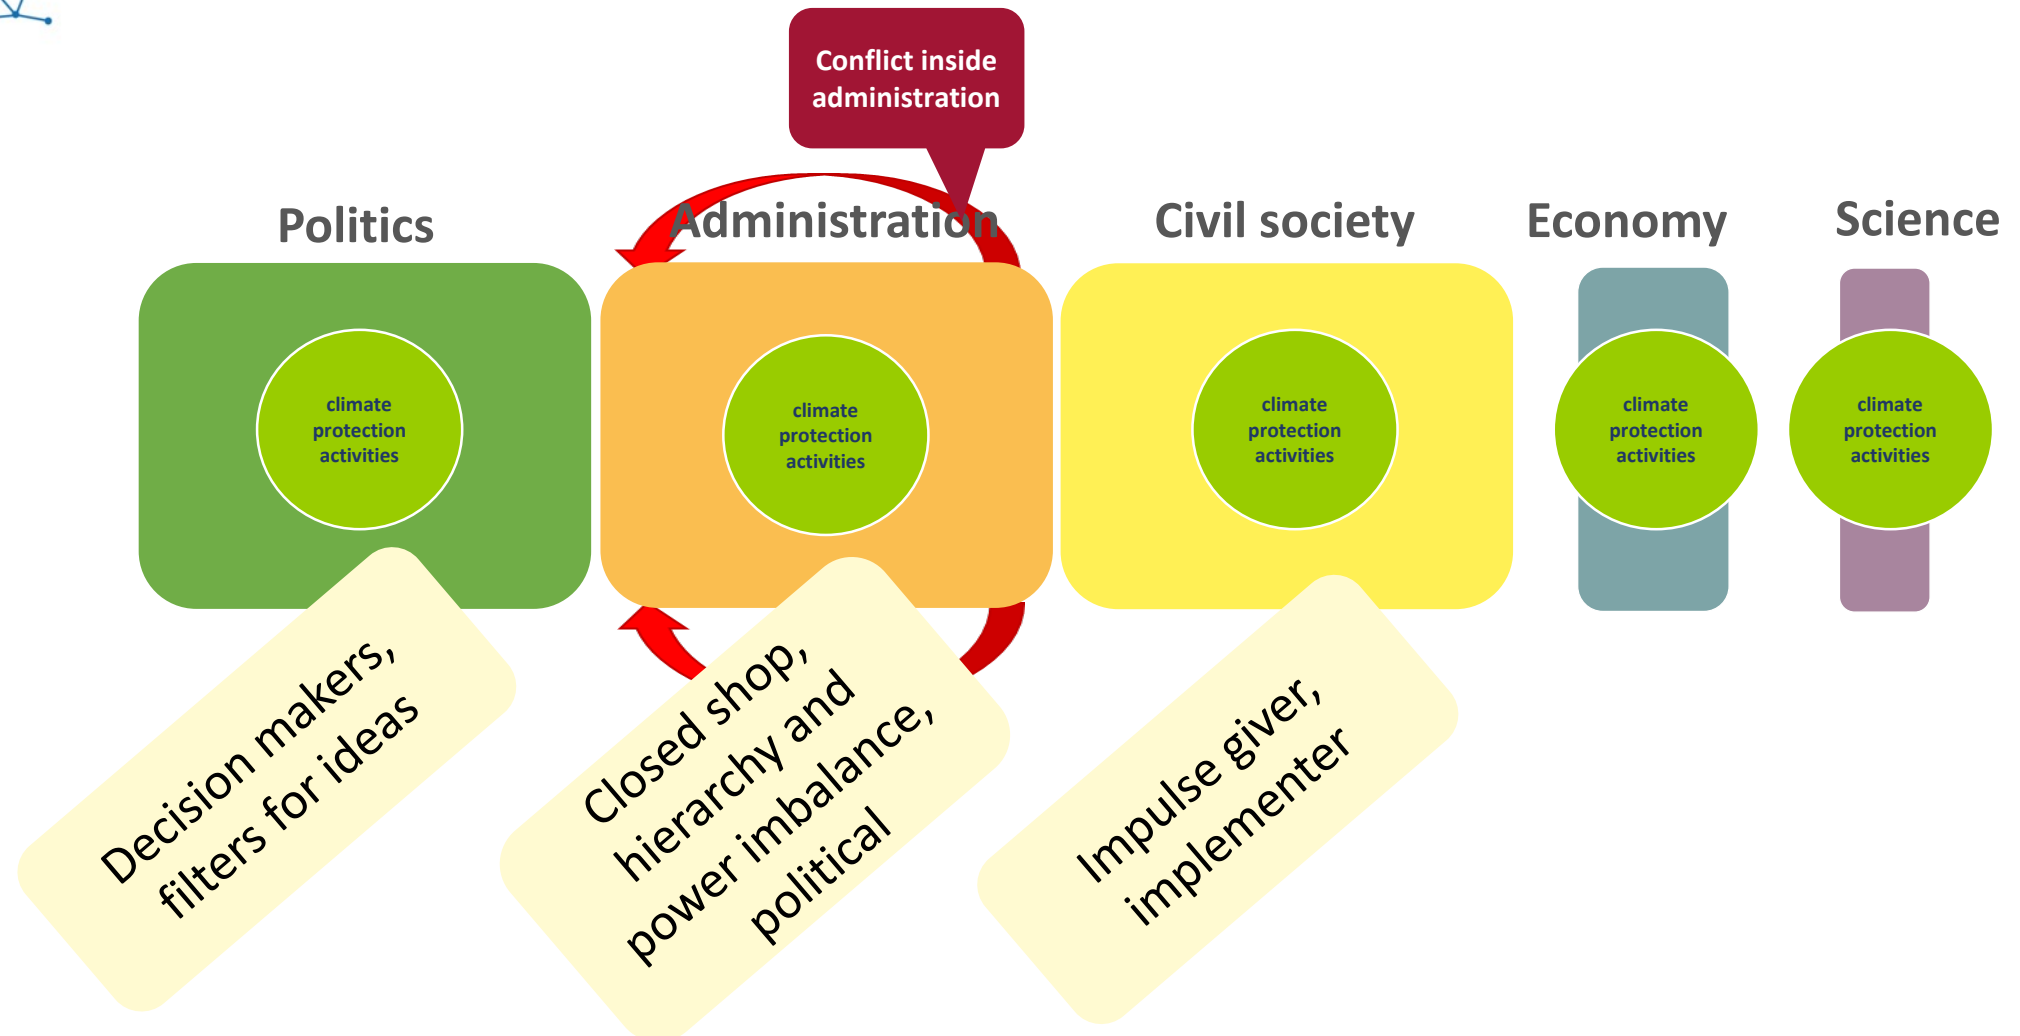

# Main data collection methods in KlimaNetze

- Qualitative Interviews with Key Actors (13)
- Online Survey (50 respondents, 601 nodes, 237 organizations, 160 projects, 121 events)
- Real world laboratories, Interviews, Participatory Observation
- NetMap group interviews with the project teams of the real world labs

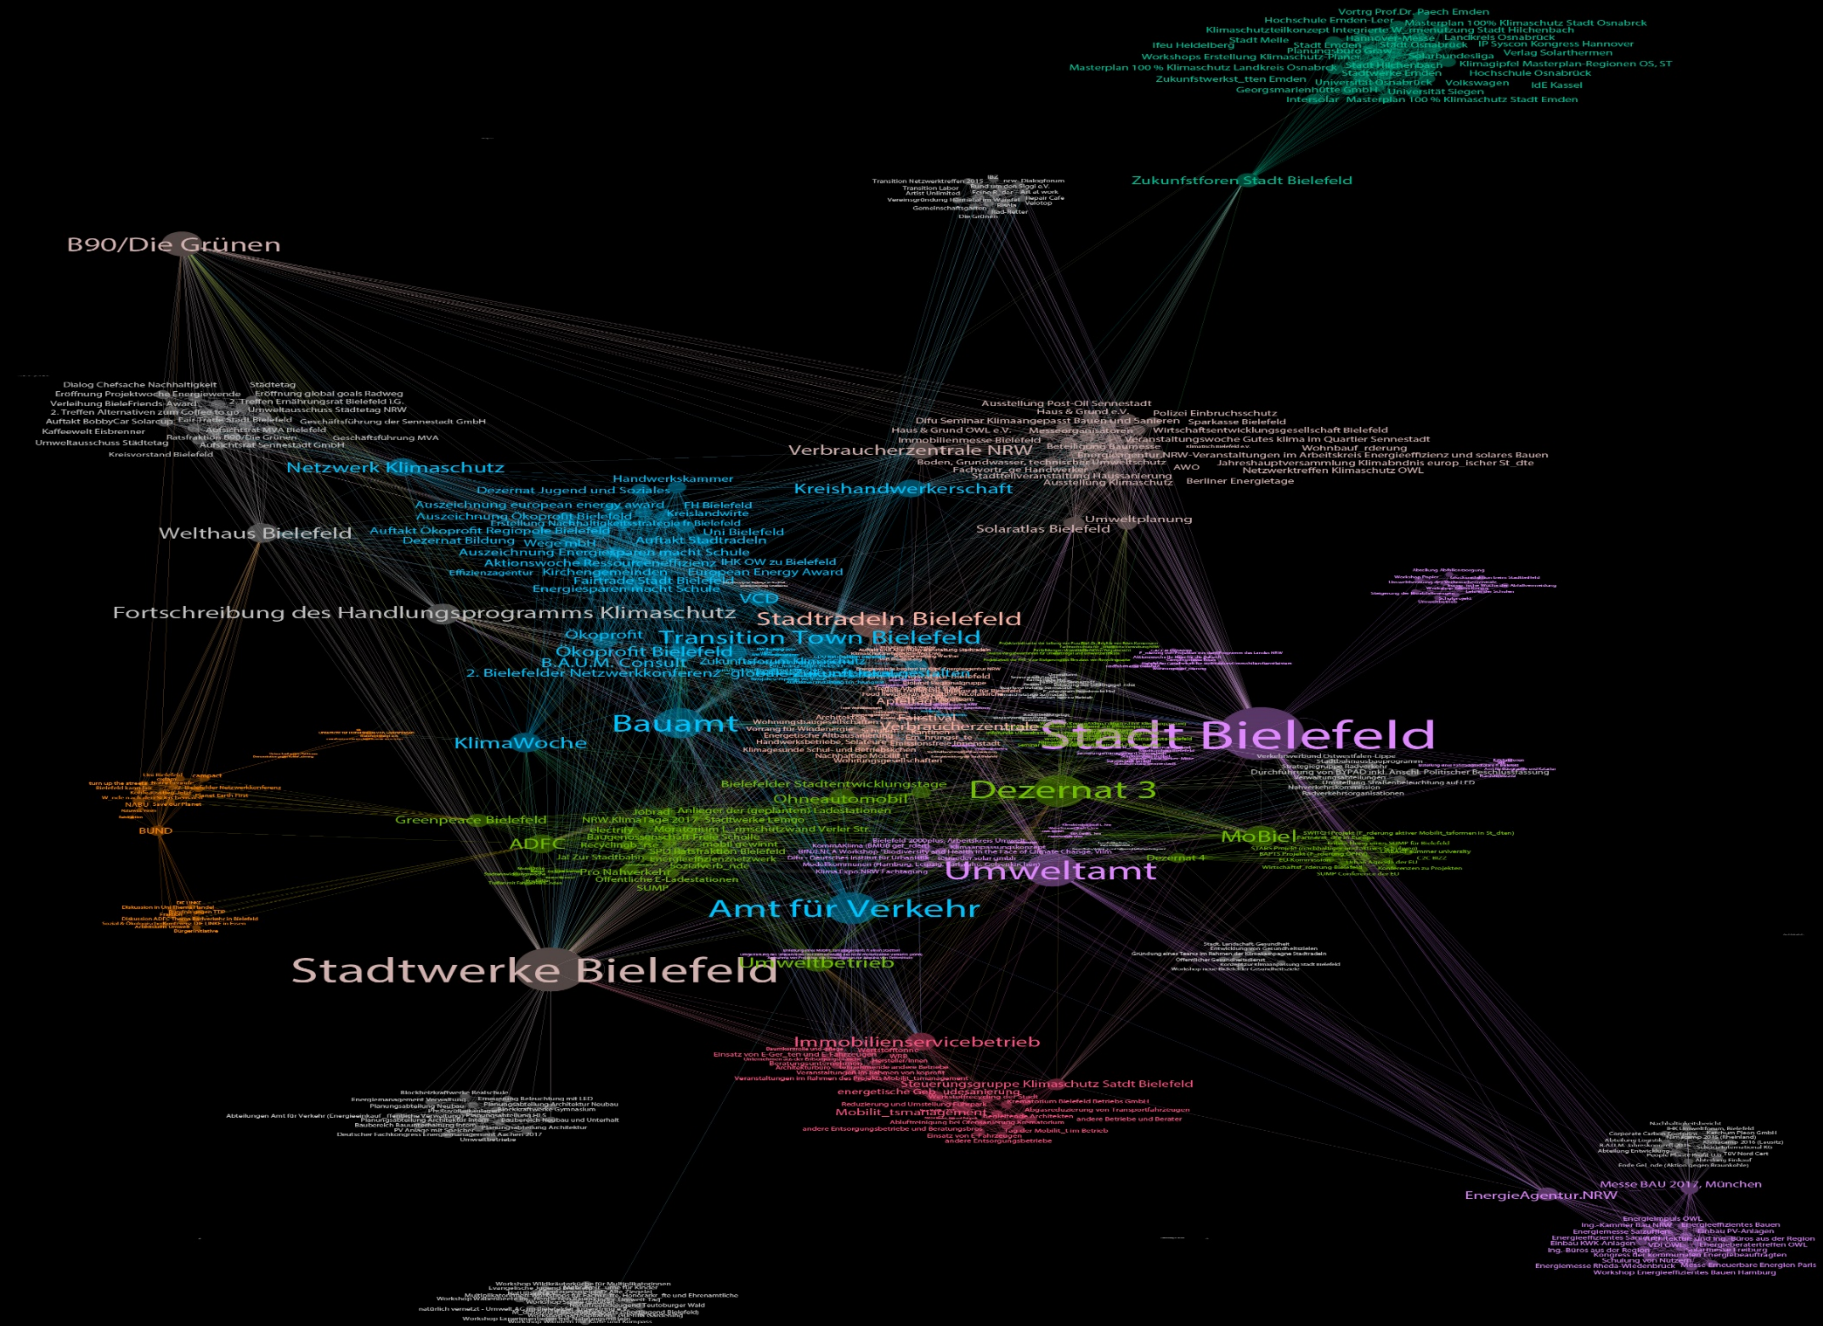

# Intensity of participation in climate protection activities and mutual perception of the stakeholder groups

## Complete urban network (Survey)

## Construction

- Network is very centralized
- Building control office as central

Energy supply

- Network is less centralized than building, but still strongly centralized
- Department of public works as central actor

Production/  
Consumption

- Decentralized network
- Is the only field of action that does not have any central actors
- Focus on civil society (model: Transition Town)
- Underpresence of municipal actors
- Important nodes are rather projects/events
- A lot of niche activities

# Mobility

- Network is less centralized
- Transport office as central actor
- City cycling is similarly central, as are MoBiel, ADFC and VCD, one level below
- Bicycle-oriented nodes are strongly represented in the field of mobility

# Roles and levels of central actors

# Finding real world laboratories

**06.10.2017: Ideas workshop** with 50 climate protection activists

> 7 Teams

Application

**12.01.2018: Steering group** with four project members

> 6 Teams

Contract

**02.02.2018: selection workshop** with climate protection activists

> 5 Teams

> 2 Teams selected

Application form,  
Consultation

Unsere Prioritäten  
für das Klimaschutz-  
Forschungsprojekt Klimaschutz

Das Projektthema  
wird entwickelt in einem ersten  
Schritt, um die ersten Schritte zu planen.

Teil des Projekts

Antraggeberin für das Projektthema

Name	Anschrift

Wir freuen uns über Ihre Teilnahme am Projektthema.

# NetMaps to support project building

# Two selected real world laboratories

**MobiNet:** Volunteers in the Field of eco-friendly mobility are pooling their activities in a new, resilient network in order to generate more impact on the whole.

First project: Preparing a referendum for a better bike infrastructure

## Using spaces for mobility

**differently:** How can an agreement on the use of space with all parties involved be done in full mutual respect? Focus: Get rid of cars in the inner-city Wilhelmstreet in Bielefeld

Action Day, Find out the needs, recommendations to politics

# What has been achieved?

## MobiNet:

- Working together to achieve great things instead of small things
- Understanding: What is a good bicycle infrastructure?
- Goal: long-term cooperation
- MobiNet = partner for the city administration

**Governance for  
climate protection!**

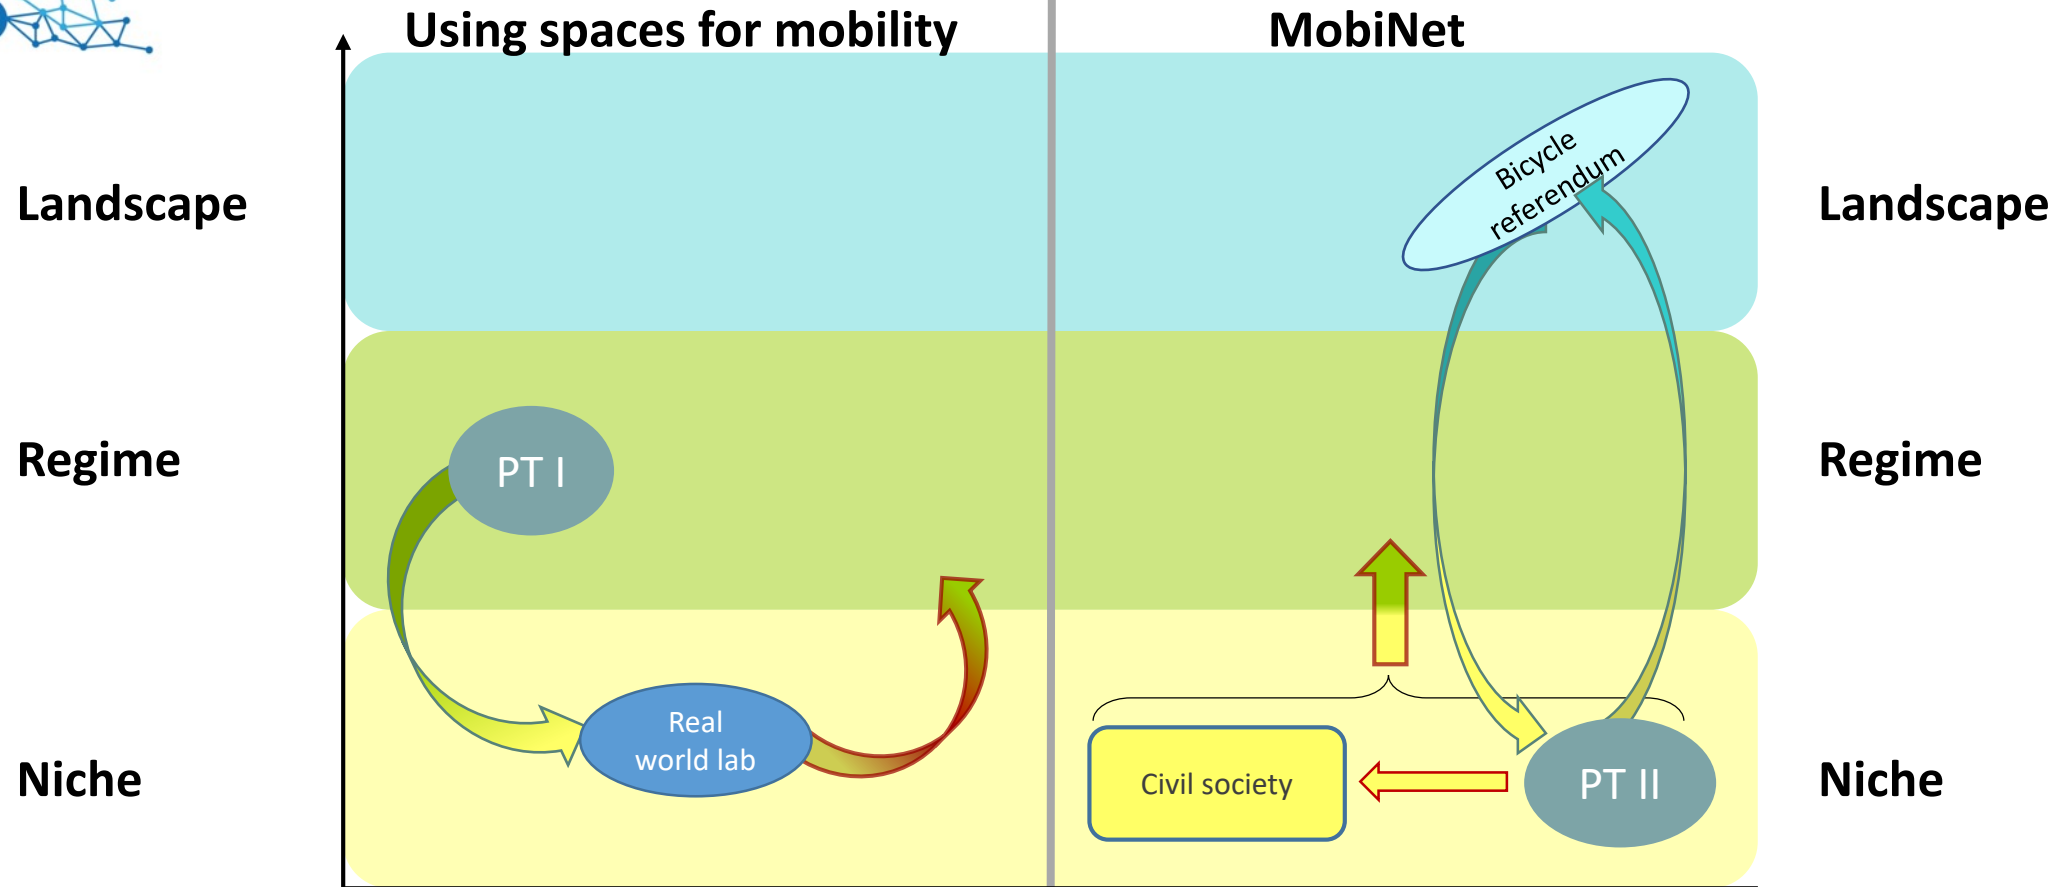

## Using spaces for mobility differently:

- Project showed: fewer cars = more quality of life
- Objectifying the discussion
- Project has prospects of being implemented

# Strategy types for networking in context

- ⇒ Actors with decision-making influence resort to protected areas (niche)
- ⇒ Carry out joint projects which they could not have implemented in the regime
- ⇒ Build trust, learn to cooperate

- ⇒ Niche players want interaction at “eye level”
- ⇒ (initially) Distance from the regime
- ⇒ Mobilising the niche, build a network
- ⇒ Become a „reliable“ partner for the city
